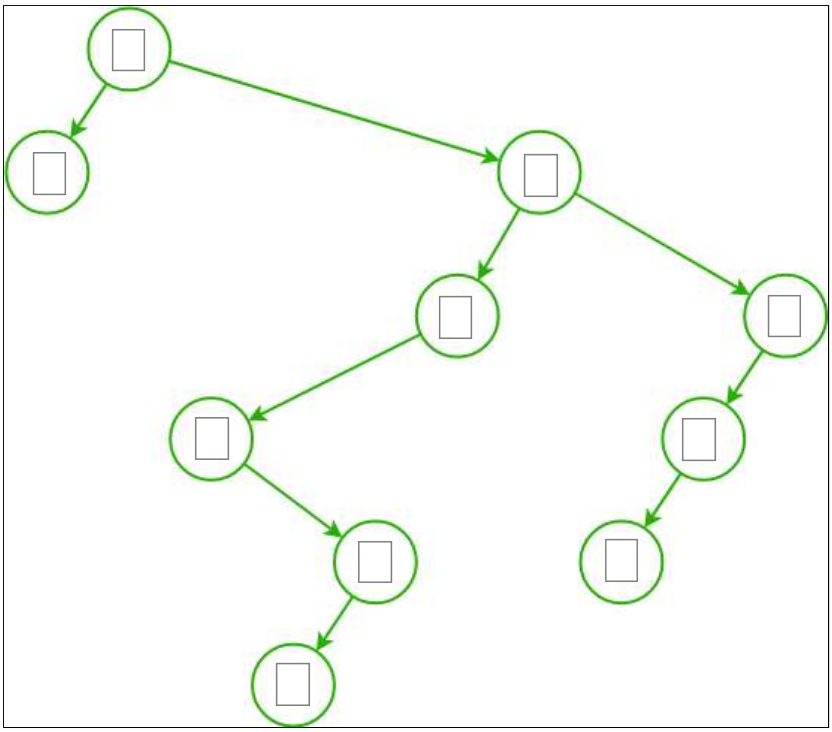
Question 1

Not answered

Marked out of 1.00

Draw the BST resulting from inserting the keys:
E A S Y Q U E S T I O N



E A S Y Q U T I O N

Your answer is incorrect.

Question 2

Not answered

Marked out of 1.00

What depth will the BST resulting from inserting the following keys have?

A X C S E R H

Select one:

- a. 8
- b. 6
- c. 7
- d. 1

Your answer is incorrect.

The correct answer is: 6

Question 3

Not answered

Marked out of 1.00

The before-mentioned BST is a worst-case BST (having the largest possible height) because of the order which the keys are inserted.

Using the same keys as before, which of the following orders will also produce a worst-case BST

Select one or more:

- a. X A S C R E H
- b. S A X C R H E
- c. A C E H R S X
- d. X S R H E C A
- e. X A S C R H E

Your answer is incorrect.

The correct answers are: A C E H R S X, X S R H E C A, X A S C R E H, X A S C R H E

Question 4

Not answered

Marked out of 1.00

Say you want to produce a best-case BST (having the smallest possible height) from the keys: A X C S E R H

Which key will you need to insert first:

Select one:

- Doesn't matter
- A
- X
- C
- S
- E
- R
- H

Your answer is incorrect.

The correct answer is: H

Question 5

Not answered

Marked out of 1.00

Say you want to produce a best-case BST (having the smallest possible height) from the keys: A X C S E R H
You have inserted the first key correctly in order to obtain a best-case BST.

Which key will you need to insert next?

Select one or more:

- [ ] Doesn't matter
- [ ] A
- [ ] X
- [ ] C
- [ ] S
- [ ] E
- [ ] R
- [ ] H

Your answer is incorrect.

The correct answers are: C, S

Question 6

Not answered

Marked out of 1.00

Suppose that a certain BST has keys that are integers between 1 and 10, and we search for 5.
Which sequence below *cannot* be the sequence of keys examined?

Select one:

- a. 2, 7, 3, 8, 4, 5
- b. 1, 2, 10, 4, 8, 5
- c. 10, 9, 8, 7, 6, 5
- d. 4, 10, 8, 6, 5
- e. 1, 10, 2, 9, 3, 8, 4, 7, 6, 5

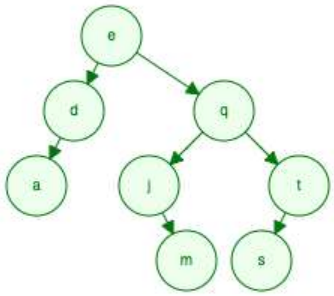
Your answer is incorrect.

The correct answer is: 2, 7, 3, 8, 4, 5

Question 7

Not answered

Marked out of 1.00



Give the sequence of nodes examined when the methods in BST are used to compute each of the following quantities for the above tree:

keys("d","t") Choose...

select(5) Choose...

floor("q") Choose...

size("d","t") Choose...

ceiling("q") Choose...

rank("j") Choose...

Your answer is incorrect.

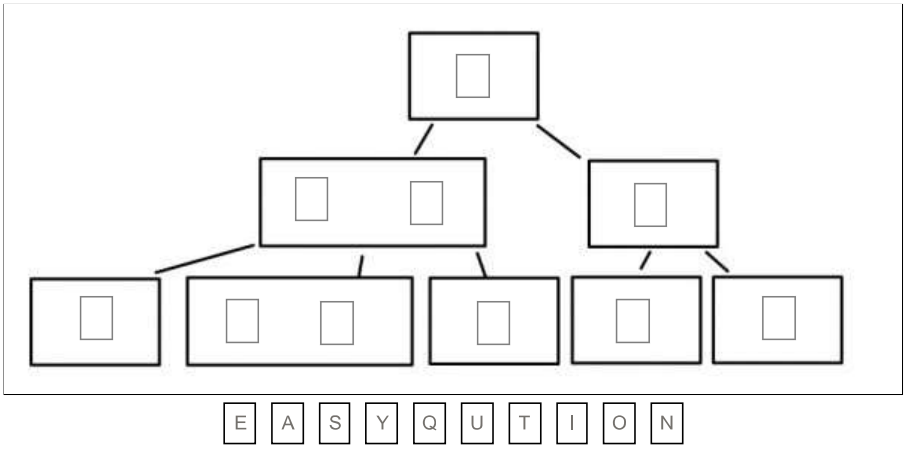
The correct answer is: keys("d","t") → e d q j m t s, select(5) → e q, floor("q") → e q, size("d","t") → e q t e d, ceiling("q") → e q, rank("j") → e q j

Question 8

Not answered

Marked out of 1.00

"Draw" the 2-3 Tree that results when you insert the keys: E A S Y Q U T I O N in that order into an initially empty tree

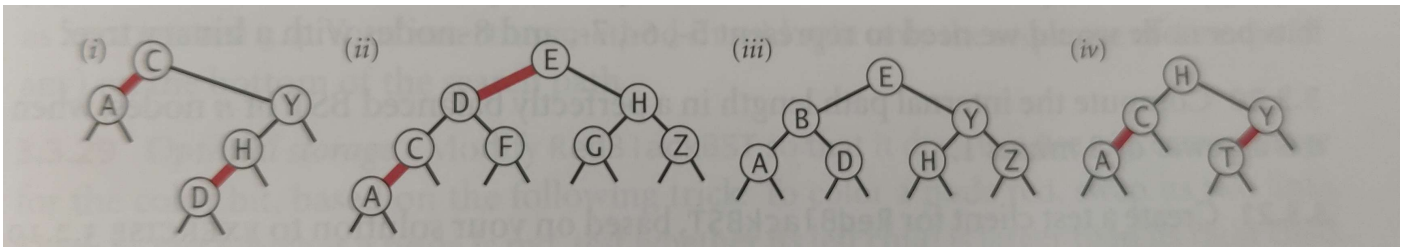


Your answer is incorrect.

Question 9

Not answered

Marked out of 1.00



(SW 3.3.9) Which of the four trees are red-black BSTs?

Select one or more:

- i
- ii
- iii
- iv

Your answer is incorrect.

The correct answers are: iii, iv

Question 10

Not answered

Marked out of 1.00

(SW 3.3.13)
True or false:

If you insert keys in increasing order into a red-black BST, the tree height is monotonically increasing.

Select one:

- True
- False

Monotonic-increasing meaning:

Always increasing or remaining constant, and never decreasing; contrast this with strictly increasing.

The correct answer is 'True'.

Question 11

Not answered

Marked out of 1.00

With which sequence of keys, if any, will the height of a BST be less than the height of a red-black BST?

Select one:

- a. 6 2 11 16 7 1
- b. Impossible!
  (No, the letters are not keys - we mean: "What you ask is not possible")
- c. 2 6 11 16 7 1

Your answer is incorrect.

The correct answer is: 6 2 11 16 7 1

Question 12

Not answered

Marked out of 1.00

What is true about the height h (including both red and black edges) of a left leaning red black tree with n keys

- a. $h \leq 2 + 2\log_3 n$
- b. $h \leq 2 + \log_3 n$
- c. $h \leq 2 + 2\log_2 n$
- d. $h \geq \log_2 n$

Your answer is incorrect.

The correct answers are: $h \geq \log_2 n$, $h \leq 2 + 2\log_2 n$

Question 13

Not answered

Marked out of 1.00

What is the tightest bound on the number of comparisons of a single search in a 2-3 Tree of height h?

- a. $\log h$
- b. $2h$
- c. $3h$
- d. h

Your answer is incorrect.

The correct answer is: $2h$

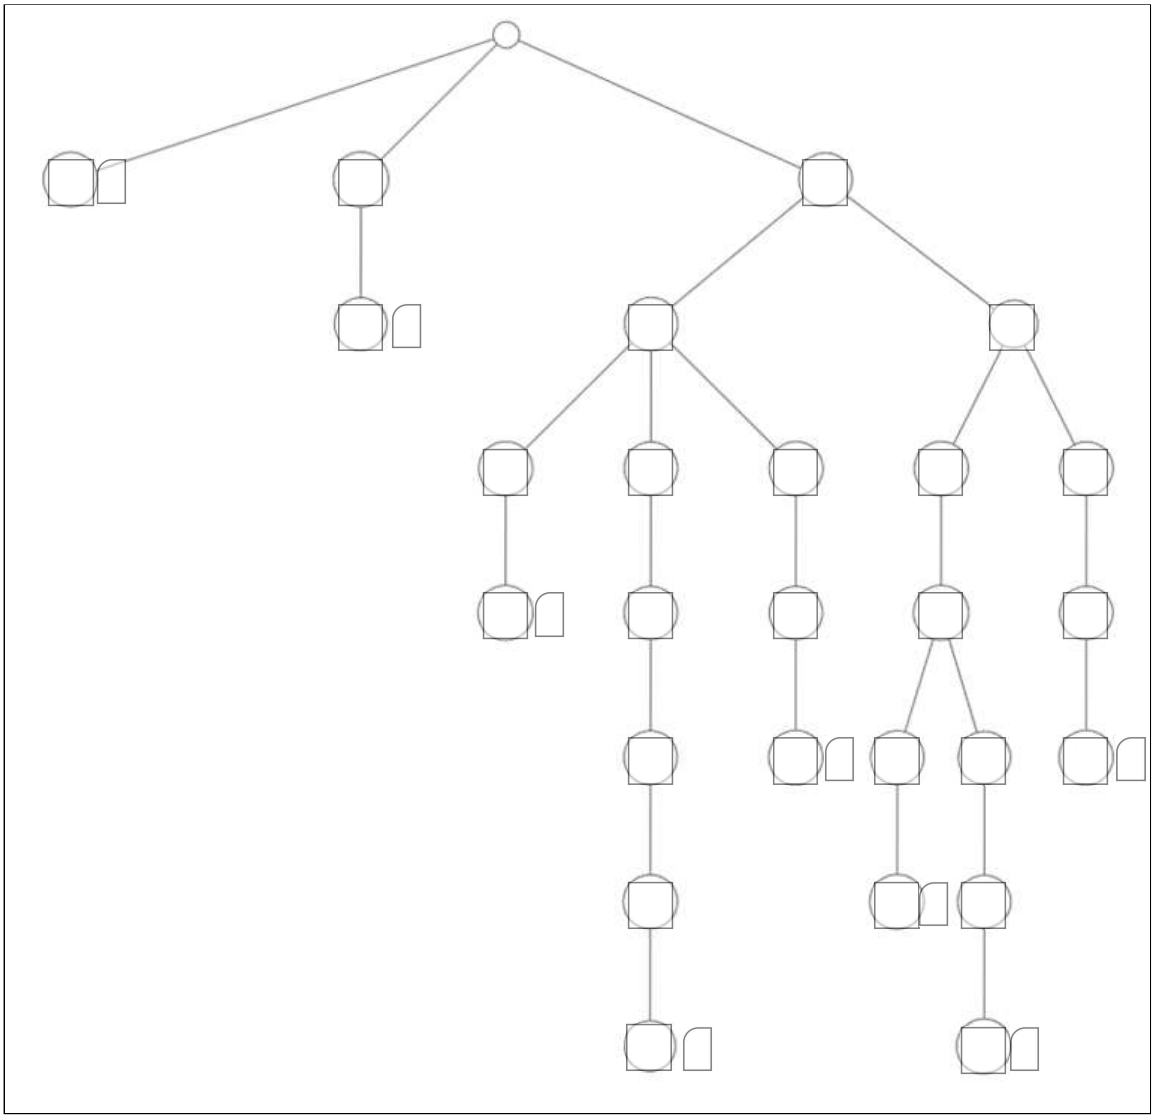
Question 14

Not answered

Marked out of 1.00

Construct the trie for the following tongue twister:

Peter Piper picked a peck of pickled peppers.



Your answer is incorrect.
